

CAN-AM CASE STUDY 2024

UT Southwestern Medical Center Dallas, TX

THE BUSINESS

BETTER BUSINESS WITH US With the best in class telematics solutions giving you a “single pane of glass” platform, instant fleet tracking and extensive analytic capabilities, Can-Am will help you harness all your data you already have, discovering any efficiency gaps and problem areas, maximizing the power of your entire fleet.

The University of Texas Southwestern researched several telematics platforms before deciding on Can-Am Geotab Telematics. Installation, implementation, and assistance to our departments has been a fantastic experience. The invaluable video telematics data, alerts, reports, and safety alert system from the dash cam has taken all our fleets to a new level of safety and efficiency”

David Siron - UTSW Police fleet manager

CHALLENGES

The challenge for UT Southwestern: with over 300 vehicles / assets the challenges are to view and review everything and all the associated data on one platform visibility, safety, compliance, utilization of its fleet during working hours, driving down insurance rates, fuel costs and maintenance issues and improving safety for staff and students alike!

SOLUTIONS

UT Southwestern, after testing Samsara and some other vendors, chose Can-Am Telematics Solutions because it provided a simple solution, utilizing SourceWell contract, providing accountability and reports with the opportunity to grow organically. Can-Am set up UT Southwestern and maintained the platform to allow the Campus to function more efficiently. In turn, saving the organization money, while allowing it to better serve its students and customers.
